FlyDVB Trio CardBus

Multiple Streaming Technology

Four products in one: DVB-T/DVB-S/Analog/Video Capture

The world's first triple reception TV card for your laptop is actually four products in one! FlyDVB Trio CardBus brings you DVB-T, DVB-S and analog TV reception as well as analog video capture in one incredible product! Experience the incredible resolution and clarity of digital television - watch your favorite sports event with DVB-T reception, or watch TV from around the world with DVB-S satellite TV reception! You can still watch all your favorite channels on analog TV, thanks to the globally compatible silicon TV tuner! A full set of onboard inputs makes it easy to connect your VCR or camcorder to save your home movies to digital format!

MST Technology = Enhanced PIP functionality

Watch digital TV and analog TV/video simultaneously with enhanced PIP functionality, thanks to LifeView's MST technology! Imagine watching your favorite sports event with high resolution video from DVB-T TV while watching the local news on analog TV! You can even watch digital TV while recording analog TV/video and vice versa - enjoy TV from around the world with DVB-S TV while archiving your home movies from your VCR!

Extensive PVR functionality at your fingertips

LifeView's DTV application provides you with a versatile set of PVR functions with a user-friendly interface. Record digital TV perfectly to MPEG-2 or take a still image snapshot and save it to your hard drive. Pause, rewind and fast forward live TV with TimeShifting functions that put you in control of your viewing experience. Schedule recordings manually, or use our effortless One-Touch Recording from EPG - never miss your favorite show again!!
